

REZULT

RELIABLE SOIL MAINTENANCE MACHINE

The REZULT straw rake marks a major advance in straw and stale seedbed management, and is the ideal tool to control black-grass and other weeds, cut slug activity and accelerate straw decomposition. By working at a shallow depth of 1-2 cm, the rake stimulates the faster emergence of weed seeds, preparing the field drilling.

2 LITRES OF FUEL PER HECTARE TO:

- spread crop residue evenly after harvesting reducing moisture loss to the atmosphere
- stimulate faster emergence of weed seeds
- manage weed growth
- manage slug activity through mechanical destruction
- accelerate post-harvest debris decomposition
- mix mineral, calcium and organic fertilisers (solid and liquid) with the soil
- prepare the field for drilling
- establish crops when fitted with a seeder unit

SPECIFICATION:

Specification	REZULT
working width	7.5 m
transportation width	2.95 m
transport lock	standard
road lights	standard
teeth spacing	60 mm
disc spacing	310 mm
Power requirement (min.)	120 - 200 HP
working speed (km/h)	10 - 20 km/h
hydraulic system	dual circuit

SPRING LOADED FRONT DISCS

The RESULT features a five-row tine harrow, with the option to fit a set of leading discs in front of them. These discs chop straw and trash and mix it with the surface tilth; the tines are then able to spread the mix over the full working width.

The leading discs generate amount of tilth making the RESULT an ideal tool for speed and chemical incorporation.

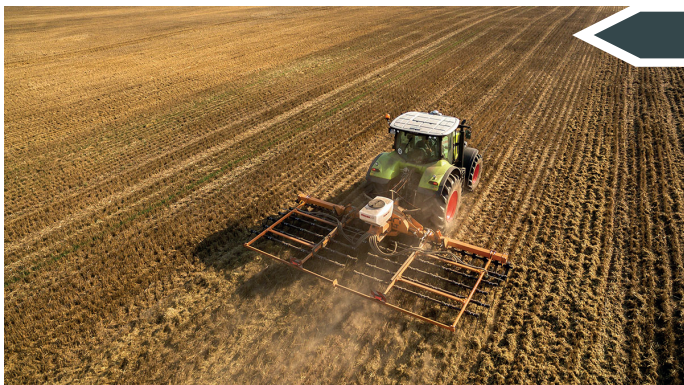

SEEDING UNIT OPTION

The MZURI RESULT rake can also be fitted with a seed hooper to sow crops with minimal effort. The 200 litre hooper means seeding 8ha per hour is easily achievable. The addition of the hooper makes the stubble rake even more versatile.

HEAVY DUTY TINES

The MZURI heavy duty, virtually unbreakable, extra long 28" tines are much stiffer than regular tines, and offer high frequency vibration to enhance the shatter action.

KEY FEATURES OF RESULT:

- independent spring loaded front discs
- hydraulically adjusted rake angle
- hydraulic folding coupled with automatic locking for safe and legal transport
- wrap around tines, proven to be virtually unbreakable
- five banks of tines offer huge clearance
